

Cleaning
(CIP) under
control

OPTIBOX

PROCESS INNOVATIONS

OPTIBOX is a complete system (Hardware & Software) for continuous recording system of all existing cleaning parameters which includes treatment of these data and which automatically offers new and optimized cleaning parameters.

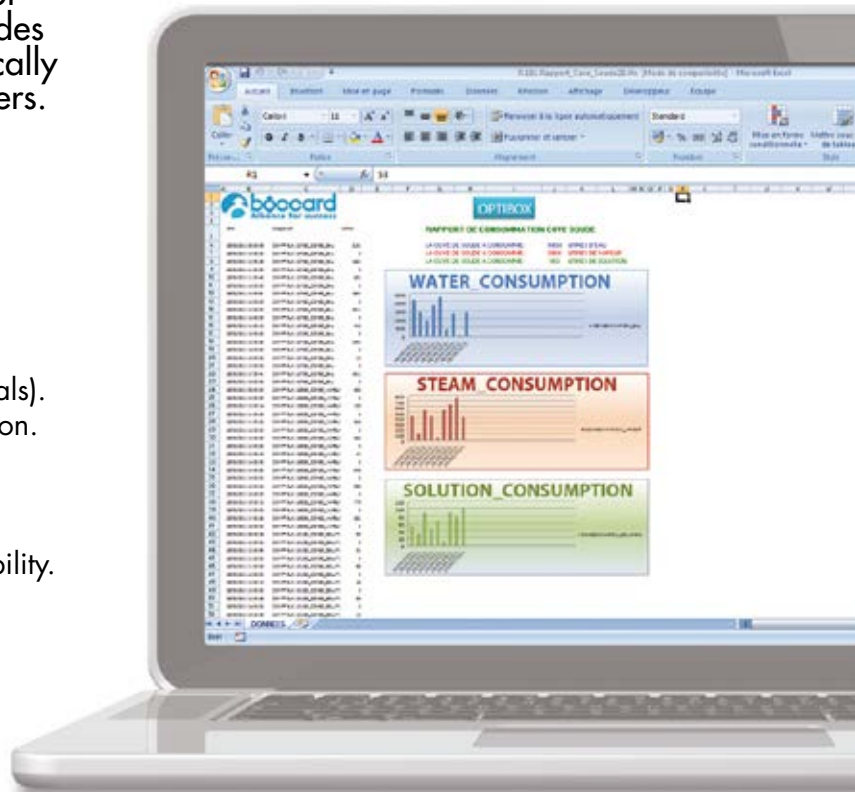

TARGETS AND RESULTS

- Recording and monitoring of the CIP consumptions (Energies, Water, Chemicals).
- Decreasing of washing water consumption.
- Optimisation of the CIP time.
- Reduction of the waste water volume.
- Energy savings.
- Installation production increased availability.
- Making your plant available for more production time.

ADVANTAGES

- Capacity to interface with any PLC in the market.
- Designed to work on the optimization of 1 to 20 CIP lines.
 - Each cleaning line may clean up to 50 machines.
 - Each machine may operate on 30 different recipes.
- Capacity to record up to 36,000 pieces of information over 2 years.
- May be integrated on any installation with the required automation level.
